

The required file **is not available** on this site.

The Journal of Operator Theory has a **moving wall** of **five years**. The full text files for articles published during the last five years are available only to subscribers.

**This is not the online webpage of the JOT**

This is only an archive of older issues that is offered freely. If you are a subscriber, please go to the online web page at <http://www.mathjournals.org/jot> in order to access the full text of most recent issues of the JOT.

The moving wall is designed to help protect the economic sustainability of journal. By not making the most current content available on this site, we preserve revenue opportunities from current issues subscriptions, while making sure that the back file is preserved and made continually accessible to scholars. Because the Editorial Board of the Journal of Operator Theory recognizes the importance to researchers of being able to discover back and current issues through a single resource, we offer links to the online version of our journal, on the front page of this site.
